not only the TR720 airband transceiver but a complete range of airband receivers

TR720 . . . a CAA type approved transceiver, ideal for glider operation. Supplied with flexible aerial, nicad battery pack and charger, the TR720 is compact, lightweight and easily transferred from glider to glider. A full range of accessories is available.

R537S . . . a tunable receiver covering 118 to 136 MHz plus the facility for two crystal controlled channels (crystals not included).

R528 . . . an airband receiver scanning four out of six crystal controlled channels (crystals not included). The R528 also has a manual channel selection switch.

R532 . . . not needing crystals, the R532 is a synthesized receiver covering the airbands from 110 to 136 MHz and having 100 programmable memory channels (ten banks of ten). An optional nicad battery pack and carrying case is also available for portable operation.

AR2002 . . . Covering not only the VHF and UHF airband frequencies but much more, (25 to 550 and 800 to 1300 MHz), the AR2002 has 20 memories and full scanning facilities. Operating from 12 volts DC, the receiver can also be used mobile (a mains power supply is included together with a simple telescopic aerial).

Please telephone or write to us here at Matlock for prices and full descriptive leaflets.

THE PRESERVATION OF BRITISH GLIDING

by Ben Watson

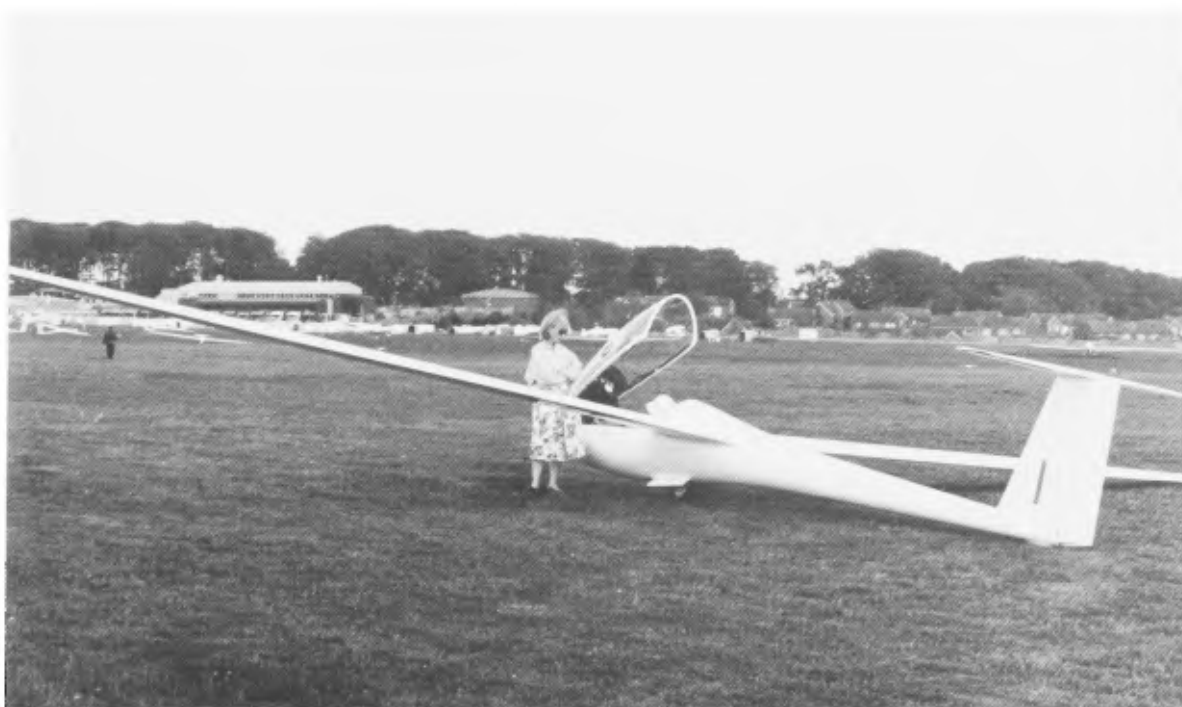

The most important task of the BGA is to maintain the liberty to manage our own affairs. This liberty was gained by our predecessors, notably Philip Wills, Ann Welch and Nick Goodhart, after much forceful argument in the corridors of power. It is up to all of us to maintain that freedom.

To most that freedom means airspace, which certainly is at present the most active issue. It requires continual vigilance and an enormous amount of time and effort by the Chairman of the Airspace Committee, the Director of Operations and many others notably the Chairman of the Political Committee who is responsible for the political lobby led most ably by our Parliamentary Spokesman Mr Bill Walker MP.

However, freedom to run our own affairs also means lower costs for all glider pilots as the following table dramatically demonstrates.

	CAA Charge for Power Flying	BGA Charge
Certificate of Airworthiness Renewal	£56.00	£22.50
Aircraft Registration	£15.00	Free
Inspector's Annual Renewal	£34.50	£15.00
Basic Pilot Qualification	PPL £80.00	A, B & Bronze: £12.50

BGA costs are low partly because we are quite efficient and keep paperwork to a minimum, but also because of the amount of voluntary work which is done for free by our members. There are more than 80 active glider pilots working on BGA Committees. And in almost every case that means ongoing out-of-hours duties as well as attendance at meetings. In addition to the Executive Committee members and staff listed opposite, the present Committee Membership is as follows:

LS 6

(Photo: Denis Campbell)

Airspace Committee (responsible for ensuring maximum freedom for local and cross country flying)

Chris Nicolas (Chairman), Bill Scull, John Holland, Ben Watson.

Competitions & Awards Committee (responsible for all competitive, record, annual award and badge flying)

John Taylor (Chairman), Ben Benoist, Guy Corbett, Ken Hartley, Ralph Jones, Ted Lysakowski, James Metcalfe, Peter Purdie, David Roberts, Mike Throssell, Ben Watson, Martyn Wells, Tom Zealley.

Development Committee (responsible for the future growth and development of the sport)

John Holland (Chairman), Bill Scull.

Instructors Committee (responsible for the instructional and flying supervisory needs of the sport)

John Morris (Chairman), Albert Johnson, Keith Mitchell, Bernie Morris, Chris Rollings, Bill Scull, Don Spottiswood, Brian Spreckley, Ken Stewart, John Williamson.

Magazine Committee (responsible for broad policy on editorial and advertising matters)

Anthony Edwards (Chairman), Roger Barrett, Mike Bird, Gillian Bryce-Smith, Rika Harwood, Frank Irving, Barry Rolfe.

Political Committee (responsible for maintaining and activating a political lobby)

John Holland (Chairman), Bill Scull.

Safety Committee (responsible for all safety aspects of gliding)

Keith Mitchell (Chairman), Vince Chambers, Ray Clifford, Arthur Doughty, David Fraser, John Reeves, Bill Scull, Dick Stratton, Paul Whitehead, David Wright.

T21B over the Long Mynd

(Photo: Ian Tunstall)

Technical Committee (responsible for the BGA airworthiness scheme)

Doug Jones (Chairman), Peter Bisgood, David Braham, Tony Dorricott, Frank Irving, Ron Lake, John Leach, Peter Moss, Jerry Odell, Roy Proctor, Dick Stratton, Maurice Tigwell, Howard Torode, Cedric Vernon, John Welsh, Lorne Welch.

We have run our own affairs successfully and responsibly for around 50 years. However our freedom is under continuous attack. To maintain it we need to ensure:

1. The highest professionalism and sense of responsibility in our operations so that we continue to deserve the respect of Government and other Agencies with whom we deal.
2. That the best and ablest club members come forward and volunteer to work on our Committees.

You are the BGA after all!

The other aspect of self preservation is of course the need for continued growth of club membership.

Here there are two keys. Publicity at local level and efficient and friendly management of new members when they join. The first is wasted without the second. How many times have you heard people say that they loved the flying but could not afford the time of waiting around on the ground. Our club system is low cost (contrast USA) but not very efficient. The BGA can exhort and help with advice but it is club members who must do the work. The BGA Publicity Officer Nikki Campbell (Tel: 0494 881166) has produced some excellent practical notes for clubs on Publicity and Public Relations which are available from her or the BGA office. There are also the 'Go Gliding' posters and the 'Introducing Gliding' brochure. Do use them to introduce your friends and colleagues to the sport!

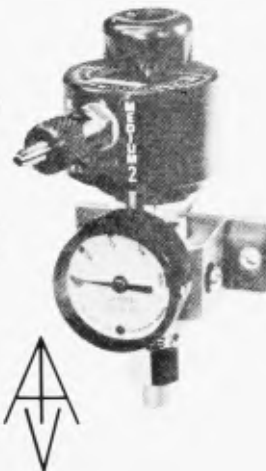

OXYGEN EQUIPMENT

The Air Apparatus & Valve A.I.R. 24 series oxygen equipment for gliders, comprising a control head and 680 litre oxygen cylinder, is now available for self installation. With all the in-flight oxygen controls situated in the one position, this control head has been developed from the Company's highly successful Domiciliary oxygen unit to Drug Tariff Specification 01B.

The 680 litre cylinder is of British manufacture in aluminium to H.O.A.L. 4 specification and is supplied valved and charged to 2000 p.s.i.

The company also supplies oxygen equipment based on 230- and 680-litre cylinders, and face masks complete with valves and economiser bags.

In the unlikely event of servicing being required, the company operates a 24-hour turn-round postal system.

NOW AVAILABLE – SLIMLINE 630 CYLINDERS

AB-INITIO TO DIAMOND BADGE

Enjoy motor gliding from Enstone
in our newly expanded fleet

A Janus CM and PIK 20E have joined our two Grob 109s, so now you can: learn to fly *ab-initio* and collect your SLMGPPL* in the Grobs; convert from Bronze and Silver Certificates to SLMGPPL; learn basic gliding techniques, field selection and navigation; develop advanced soaring techniques in the Janus CM, and go for cross-country soaring flights and Badge attempts in the PIK 20E and the Janus.

Complete beginners are welcome. Courses planned to suit your timetable and budget. Friendly club atmosphere. Seven days a week operation throughout the year.

No membership subscription. Tuition by CAA-approved instructors. Book flying by the hour. Pay only for flying. All aircraft available for private hire.

*Self Launching Motor Glider Private Pilot's Licence

Life's Rich Tapestry...

Can become a little threadbare at times!

It's at these times you could be very glad that your glider (or boat, or car) has the best available insurance.

Although Mowbray Vale are experts on aviation insurance, they do cover just about everything else as well!

So if you need a policy that's cut to suit your particular cloth, it makes sense to go to the best Taylor!

*Ring Carol Taylor or Stephen Hill on

(Photo: Denis Campbell)

NATIONAL LADDER RULES

1. Any pilot who has permission to fly cross country may take part.
2. Flights may be made anywhere in the U.K. in any glider, except that no flights in any competition for which entry forms are required may count. Points will only be awarded to the P1 in a two-seater.
3. The current BGA handicap (SI) will apply to the calculation of all open-ended tasks. An adjusted handicap (S_h) will apply to all closed circuit tasks.
4. The year will start on October 1st and end on September 30th.
5. There will be two separate ladder competitions: – (a) The Open Ladder (for any glider), (b) The Club Ladder (for flights in club owned gliders only). Flights in private gliders may only be entered in the Open, but flights in club gliders may be entered in either ladder (but any one flight may only be entered in one ladder).
6. A pilot may enter up to four flights in each ladder but only two in each ladder may be height gains.
7. The pilot's word will be accepted for rounding of turning points and for flight times. Barograph traces must be shown to Club Ladder Stewards for height claims.
8. Distance flights must be at least 50km and comply with the 1% rule. Declarations if made, must be made before take-off. Any flight may have up to three turning points, and these may be rounded with the flexibility permitted by FAI Badge Rules provided the flight is a genuine distance badge attempt. Start, finish and turning points must be features shown on 1:50,000 Ordnance Survey maps.

9. CALCULATION OF POINTS

a) Distance marks

Undeclared flights (completed or not)	$\frac{d \times 100}{SI \text{ or } S_h}$
Declared flights (completed or not)	$\frac{2 \times d \times 100}{SI \text{ or } S_h}$

where d= distance in km.

SI= speed index for open-ended tasks.

S_h= speed index for completed closed circuit tasks.

(see BGA Speed Index Table, published overleaf for values of SI and S_h)

b) Speed marks (declared, completed tasks only)

1) The airfield boundary will constitute the start and finish lines; alternatively, recognisable features away from the airfield may be declared for either or both, provided that the start and finish are within 2km of each other.

2) The start line must be crossed below the lower of 1000 metres or 1% of the distance, above the height of the finish line.

3) Speed points will be awarded as follows (in addition to distance marks).

Open-ended tasks

$$\frac{d \times 100 \times v^2}{SI \times 2000}$$

$$SI \times 2000$$

where d= distance in km, v= handicapped speed km/hr.

Closed circuit tasks

$$\frac{d \times 100 \times v^2}{SI_h \times 2000}$$

$$SI_h \times 2000$$

i.e. $v = \frac{d \times 100 \times 60}{SI \text{ (or } SI_h) \times (\text{time in minutes})}$

c) **Height gain** (not more than two per pilot per ladder)

1) If height points are claimed, distance or speed points cannot be, for the same flight.

2) No points may be claimed for flights above 15000ft without oxygen.

3) Points are calculated as $\frac{\text{height gained (in feet)} - 5000}{10}$

10

10. Details of flights must be submitted to club Ladder Stewards within one month of each flight.

11. **Radius Rule** (uncompleted declared tasks). The distance counted for the uncompleted leg is the declared length of that leg less the distance between the landing point and the next turning point. (As in BGA Competition rules.)

12. **National Ladder Awards**

Enigma Trophy. To the winner of the Open Ladder.

L. duGarde Peach Trophy. To the winner of the Club Ladder.

Firth Vickers Trophy. Runner-up in Open Ladder.

Slingsby Trophy. Runner-up in Club Ladder.

NOTES

1. Ballast

Gliders marked * denote the ability to carry jettisonable water ballast; without such ballast the speed index is reduced by 2. Gliders without an asterisk should have the index increased by 2 if they are able to carry jettisonable ballast.

2. Span

Extra span to the normal version increases the speed index by 1 per metre of extra span or part thereof. Gliders with optional wingtip extension shall have their speed index increased accordingly when flown with the extension fitted. However, where the fitting of extensions precludes the carriage of otherwise optional water ballast this increased speed index shall be reduced by 2.

3. Winglets

Gliders fitted with optional NASA-type winglets have their speed index increased by 1.

4. Other Modifications

These should increase the speed index by at least 1 pending decision by the BGA Handicapping Sub-Committee.

5. National Ladder Handicapping

The values of Slh are used in the National Ladder scheme for scoring completed closed-circuit flights, based on a typical wind of 10.75 knots.

GLIDING QUALIFICATIONS

Flying a Glider

There is no requirement to hold any licence to fly motorless gliders in Britain, but you must be aged over 16 to act as pilot in command. However, the BGA issues a Gliding Certificate endorsed to mark various stages of proficiency and achievement, as follows.

The Gliding Badges

The A, B and Bronze Badges and the UK 750 km Diploma are National Standards set by the BGA. The Silver and Gold Badges, Diamonds and 1,000 km. Badge are International Standards laid down by the FAI.

The candidate must make at least 20 flights in a glider or motor glider before attempting any tests unless he is a qualified aeroplane pilot. The candidate must be alone in the aircraft for each test. Badge attempts may be flown in a motor glider provided there is proof that the engine was stopped after launch and not re-started during the period of the attempt.

A working barograph sealed by an Official Observer must be carried for all the FAI badge tests and the UK 750 km diploma except the 5 hours' duration where this is made locally and under continuous observation. If photographic evidence of reaching turning points is used the photographs must be taken in accordance with the FAI Sporting Code.

Flights for the A, B and Bronze Badges, must be carried out separately and consecutively. For the Silver, Gold and Diamonds any number of tests may be completed on any flight.

CENTRAIR PEGASUS

(Photo: Jane Randle)

A Badge

One solo circuit in a glider, or a motor glider in unpowered flight after the launch, followed by a satisfactory landing. Knowledge of the basic Rules of the Air.

B Badge

A soaring flight of at least five minutes at or above the previous lowest point after launch followed by a satisfactory landing.

Bronze Badge

A minimum of 50 solo flights in a glider. (A 2,000ft aerotow counts as three flights and a PPL or similar Service or foreign equivalent, counts as 25 flights). Two soaring flights each of 30 minutes duration if launched by winch, car or bungee, or each of 60 minutes after release from aerotow at a height not exceeding 2,000 ft. A minimum of two flights in a dual controlled glider with a Full Rated Instructor (or ATC 'A' Category Instructor) who will satisfy himself that the candidate is proficient in the following:

- (a) Well co-ordinated and accurate general flying, especially keeping a good lookout.
- (b) Understanding and recognition of the symptoms of the stall, incipient spin and full spin followed by the correct recovery. If sufficient height is not available for the full spin then practice to the incipient stage is acceptable.
- (c) Two field landings into a field, or, if a suitable field is not available adjacent to the club site, into a marked area of the airfield; the altimeter should be covered or the millibar scale offset for this practice. If a marked area of the airfield is used it must be so chosen that there is little or no undershoot and that the circuit and approach does not coincide with the normal circuit and approach to the airfield. Where a suitable two-seater is not available the field landings only may be flown solo.

The candidate must pass written Air Law and General papers and the flying and ground test must all be completed within the 12 months prior to the application.

2 passport photographs of the pilot signed on the back are required for the Bronze Badge.

Silver Badge

- (a) A duration flight of not less than 5 hours.
- (b) A distance flight of not less than 50 km (31.07 St miles) made in a straight line in which the difference in height between release and landing must be less than 1% of the distance covered.
- (c) A gain of height of at least 1,000 metres (3,281 ft).

Gold Badge

- (a) A duration flight of not less than 5 hours.
- (b) A distance flight of not less than 300 km (186.4 St miles) made either:
 - (i) in a straight line, or
 - (ii) round not more than 3 pre-declared turn points the sequence of which need not be designated, except that the same turn point may not be rounded twice. There is no obligation to return to the point of departure or reach a designated goal.
- (c) A gain of height of not less than 3,000 metres (9,843 ft)

Diamonds

- (a) A completed closed-circuit of not less than 300 km, over a pre-declared out-and-return course or triangular course flown in a designated sequence.

(b) A distance flight of not less than 500 km (310.7 St miles) – requirements as for Gold Distance.

(c) A gain of height of not less than 5,000 metres (16,405 ft).

1,000 km Badge

The FAI awards a badge for a distance flight of 1,000 km or more – requirements as for Gold Distance.

UK 750 km Diploma

A distance flight of not less than 750 km starting in the UK – requirements as for Gold Distance.

Authentication

The full procedure for authenticating badge flights is contained in the current FAI Sporting Code.

Other Qualifications

For a summary of the various requirements for Instructor Ratings, Medical Standards, Radio Licences, etc, see the current edition of the BGA 'Laws and Rules' booklet.

Annual Soaring Awards

The following are awarded for each calendar year to the best flights in each category starting in the UK; Distance may be flown according to current F.A.I. Badge Rules, and for the purpose of these awards, distances and speeds are measured on handicapped basis according to the glider's B.G.A. Speed Index. Prospective claimants should notify the Competitions and Awards Committee by the 31st December.

WAKEFIELD TROPHY – Longest distance flight

CALIFORNIA IN ENGLAND TROPHY – Longest distance flight by female pilot

VOLK TROPHY – Longest out and return flight

FURLONG TROPHY – Longest triangular flight.

SEAGER CUP – Longest distance flight in a two-seater

FRANK FOSTER TROPHY – Fastest declared 500 kms closed circuit with maximum of 2 turning points.

MANIO CUP – Fastest declared 300 kms closed circuit with maximum of 2 turning points.

REX PILCHER TROPHY – Earliest declared 500 kms triangle of the year by a pilot completing this task for the first time.

DE HAVILLAND TROPHY – Maximum gain of height

DOUGLAS TROPHY – Winners of the Inter-Club League.

THE VINTAGE GLIDER CLUB

by Chris Wills

The Vintage Glider Club was formed in 1973 with the object of preserving pre-1945 designs, not as static museum pieces but restored to airworthy condition to be seen in the air where we feel they belong.

Since 1973 we have held 13 International Rallies in Britain, Germany, France, Holland, Switzerland and Hungary, with countless smaller rallies. Everywhere we have been, we have generated enthusiasm for restoring and flying old gliders. We have been to the dusty plains of central Europe and to the eternal snows of the highest mountains; in 1985 some of our members were launched from the 11,300ft Jungfrauoch in Switzerland in memory of an international contest held there 50 years previously.

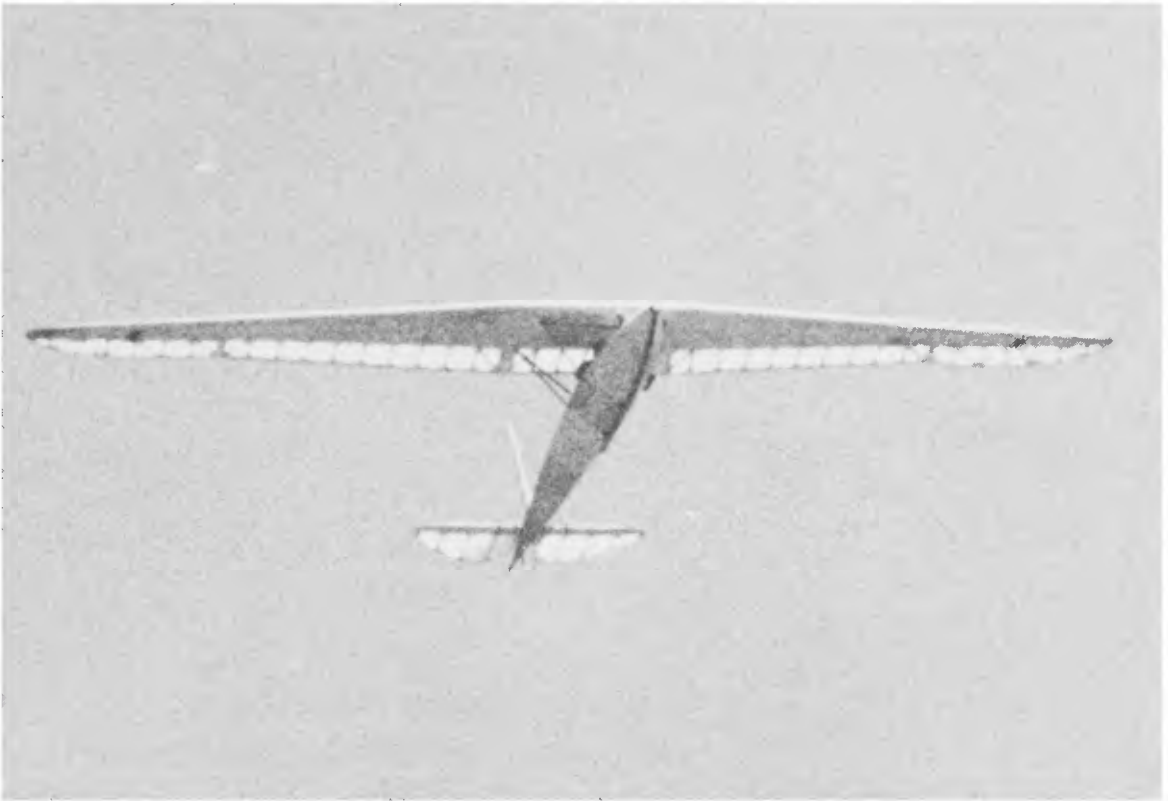

Our members have continued to restore more vintage gliders, and have also built replicas of types which no longer exist, or which for some reason have not been released by their owners for restoration. We have situations where second prototypes fly 45-50 years after the first, such as the King Kite built in 3 years by David Jones in his Coventry living room, and a replica of the wartime Gull 3 scheduled to fly in 1986. I've flown the King Kite, and would say that if the original had been as good as the second prototype, British gliders would have been the best in the world in 1936.

Even older, a replica 1931 Falcon 1 (the first of Fred Slingsby's designs) is expected to fly in 1986. Many more vintage gliders in Britain are scheduled to be restored in the years to come, and a great number of the T21's and T31's made redundant by the Air Cadets are coming into our movement. The Germans are building replicas of the Habicht and Rhoadler, and restoring further examples of the Minimoa and Goevier, whilst the Dutch are working on a Grunau 8 two-seater and the French are restoring dozens of vintage gliders designed mostly during 1941/42.

We have become a great international family, with 540 members throughout the world. Co-ordination comes from Chris Wills (President), Robin Traves (Secretary), Peter Woodcock and Sally Shephard (Sales and Archives), all honorary officers working in their spare time. A VGS News magazine is put out 4 times a year with news, photographs, drawings, etc. We like to think that our movement captures something of the past, and gives people young and old a particular pleasure in this different kind of flying. Apart from the nostalgia, vintage glider flying can be very cheap compared with other flying. Our accident rate is not bad – touch wood. There have been only 2 major accidents in 13 years, and it is hoped that even these gliders will be repaired!

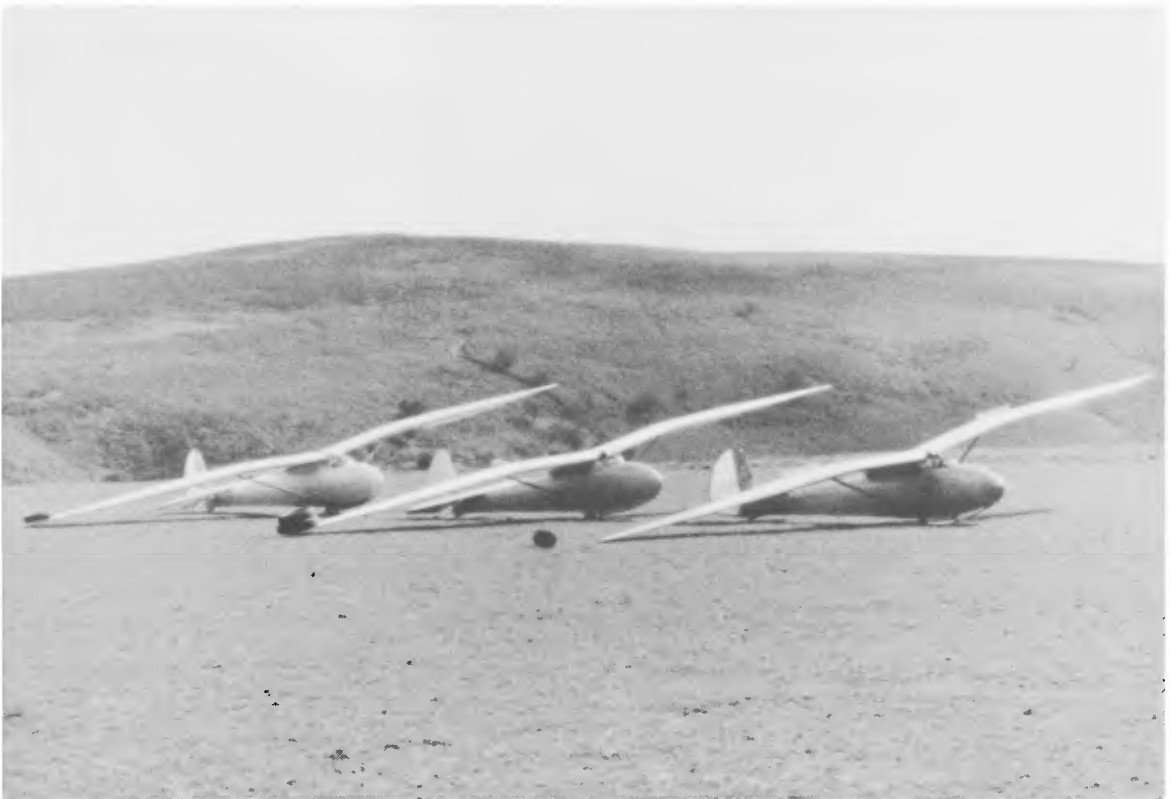

In 1986 our International Rallies will be at Dunstable during the last week of July and the official 14th International Rally at Lasham during the first week of August. If more than 50 gliders enter, these will be the largest vintage rallies ever held. Future events are planned for Germany (1987), France (1988) and Hungary (1989).

West German SALTO aerobatic sailplane

CANOPIES

Perspex replacement units for most glass and wood gliders. All canopies are moulded stress free with a new technique and with superb optics.

Size range – from as wide as a Motor Falke to as long as a K-13.

Immediate fitting service if required.

BOB REECE, Rematic

School House
Norton, Nr Worcester

Tel Worcester (0905) 821334

GLIDING AND UK AIRSPACE

by Chris Nicholas

Chairman BGA Airspace Committee

This article outlines the current airspace situation as it affects glider pilots. Although intended for use as a reference guide, the article is not in itself an authoritative document and in case of doubt in sensitive areas, the UK Air Pilot should be consulted.

AERODROME TRAFFIC ZONE (ATZ)

Since April 26th 1985, ATZ's have existed only at Government aerodromes, licensed aerodromes with two-way air/ground radio and aerodromes with an Air Traffic Control unit or Aerodrome Flight Information Service unit. Aircraft shall take off, fly or land in an ATZ only with permission.

The definition of an ATZ is currently the airspace extending from the surface to a height of 2000 feet above the level of the aerodrome and within a distance of 1½ nautical miles of its boundary. (Proposals are in hand to revise the definition – small aerodromes would have ATZ's of 2 NM radius, larger aerodromes 3 NM radius.)

At airfields without ATZ's, including most gliding sites regardless of how busy they are, an itinerant aircraft may legally penetrate the airspace near and over the airfield, providing the pilot conforms to the traffic pattern or keeps clear of the circuit airspace, and observes the normal rules of good airmanship to avoid collisions.

Some airfields are designated "Prior Permission Required" (PPR). This usually means a telephone call, but full details are set out in the AGA section of the UK Air Pilot. All military airfields are effectively PPR and should be avoided.

MILITARY AERODROME TRAFFIC ZONES (MATZ)

A standard MATZ comprises the airspace within 5 NM radius of the centre of the airfield extending from the surface to 3,000ft above airfield elevation. In addition there is a projecting stub 5 NM long and 4 NM wide extending from 1,000ft to 3,000ft above airfield elevation, aligned with the approach to the main runway, although in some MATZ's the stub may be absent or smaller.

The rules applicable to the penetration of a MATZ are not compulsory for civil aircraft, but inside every MATZ there is an ATZ (see above.)

CONTROLLED AIRSPACE

Controlled Airspace is either notified for Rule 21 of the Rules of the Air and Air Traffic Control Regulations or it is not. Rule 21 makes Airspace subject to permanent instrument Flight Rules regardless of weather conditions. This involves the filing of flight plans, pilots holding instrument ratings, carriage of certain radio equipment, etc.

If it is not notified for Rule 21 it means that VMC flights are not subject to these requirements and therefore gliders flying in VMC are permitted. Controlled Airspace sometimes occupies the same volume of sky as Special Rules Airspace (peculiar to the U.K.). In such circumstances the special rules relate only to the requirement for pilots to communicate with the controlling authority, and usually gliders do not have exemption from this requirement.

AIRSPACE ABOVE FLIGHT LEVEL 245

The entire country is controlled above FL 245 but none of the rules are applicable to gliders.

VISUAL METEOROLOGICAL CONDITIONS (VMC)

To comply with VMC within Controlled Airspace, or above, 3,000ft outside Controlled Airspace, or above 3,000ft within Special Rules Airspace, a pilot must remain at least 1,000ft vertically and at least 1 NM horizontally from cloud in a flight visibility of at least 5 NM, as interpreted by the pilot.

Bearing in mind that modern military and civil jet aircraft travel very fast and are capable of high rates of climb and descent and notwithstanding the minimum criteria stated below, it is prudent to exercise the greatest care when flying where such traffic is known to exist.

AIRWAYS

Airways are Rule 21, but an exception is made for gliders. The relevant paragraph in the Air Pilot States: "Gliders may cross an Airway, except a Purple Airway (see below), in VMC by day without compliance with any of the requirements . . ." Note that the manner of crossing is not specified.

Some control areas may be treated as if they were airways, currently Daventry and Worthing.

Purple Airspace is established from time to time, to protect Royal Flights in fixed wing aircraft, within which ATC apply special procedures. Full details are promulgated by special NOTAM and it is important that Gliding Clubs receive this information, because gliders are not permitted to fly in Purple Airspace.

CONTROL ZONES/AREAS (CTR/CTA), SPECIAL RULES ZONES/AREAS (SRZ/SRA), AND TERMINAL CONTROL AREAS (TMA)

The Rules are complex, but the following tables are a simplified guide.

Areas in which Gliders may fly provided they maintain VMC

Cross Channel SRA

**Bournemouth/Southampton
SRA/SRZ**

Lyneham SRA/SRZ

Southend SRA/SRZ

Scottish TMA/SRA/CTR

**Stansted SRZ/SRA
(but see below)**

Leeds/Bradford SRA/SRZ

East Midlands SRA/SRZ

Aberdeen SRA/SRZ

Newcastle SRA/SRZ

Manchester TMA

Tees-side SRA/SRZ

Areas in which Gliders may not fly, regardless of the weather

Heathrow CTR

Prestwick SRZ

Gatwick CTR/SRZ/SRA

Manston SRZ

London TMA

Glasgow SRZ

Birmingham CTR/SRZ/SRA

Liverpool SRZ

Cardiff CTR/SRZ/SRA

Blackpool SRZ

Manchester CTR (except for a small portion up to 1,250ft AGL)

Stanstead SRA, only the portion between Standsted and Luton between 3,500ft AMSL and FL 65.

Luton SRZ/SRA

Bristol SRA/SRZ

Brize Norton SRZ

Edinburgh SRZ

} But see below.

Areas in which Gliders may fly provided certain rules are followed

Luton SRA

Part of this may be used for taking off or landing at **Dunstable** (London Gliding Club). These rules are complicated and should be studied before flying into the area: refer to Air Pilot, RAC Section.

Bristol SRA/SRZ

Part of this may be used for gliding under a Letter of Agreement with the Mendips Gliding Club, with whom contact should be made before using the airspace.

Brize Norton SRZ

Gliders may penetrate the SRZ at weekends in VMC provided that.

- a) Transits are made for cross-country record attempts on triangular routes which cannot be arranged to avoid the SRZ.
- b) On the day of the proposed flight the pilot must contact the ATC Watch Supervisor on Carterton 842551 and pass an approximate Zone Boundary ETA. At this time, but not later, ATC may refuse permission for operational or safety reasons.
- c) The pilot must call Brize Norton on 130.4 MHz before penetration. In the absence of any reply the pilot may continue, assuming responsibility for lookout and separation within the ATZ, while listening out on 130.4 MHz.

Edinburgh SRZ/SRA

Transits are available to gliders contacting Edinburgh on 130.4 MHz. It will be necessary to activate the frequency by telephone before departure.

AREAS OF INTENSE AIR ACTIVITY (AIAA)

An AIAA is airspace which is not otherwise protected by regulated airspace, but where the intensity of civil and/or military flying is exceptionally high, or within which aircraft regularly participate in unusual manoeuvres.

Twelve AIAA's are currently listed, and shown on the 1:500000 topographical charts used by most glider pilots.

Gliders may penetrate these areas, but in view of the hazards, a sharp lookout is advisable.

UPPER HEYFORD RADAR ADVISORY SERVICE ZONE (RASZ)

Although not listed as an AIAA, the Upper Heyford RASZ is similar. Again the procedures are not mandatory for civil aircraft, but the Air Pilot contains the following advice:

“Since it will obviously be in the interest of Flight Safety for Upper Heyford ATC to have knowledge of all aircraft flying in the RASZ, pilots of gliders and non-radio equipped aircraft intending to operate within the zone are advised when possible to telephone ATC on Upper Heyford (086982) 4843 before take off in order to make known their intentions. However, flights made in accordance with standing arrangements are excluded from this procedure.”

A new Mandatory Radar Area is proposed to replace the RASZ in April 1986.

PROHIBITED AREAS

Apart from certain security areas in Northern Ireland, the Prohibited Areas comprise the Atomic Energy Establishments at:

Winfrith

Calder/Windscale (Sellafield)

Aldermaston

Capenhurst

Harwell, Springfields and Dounreay are classed as “Restricted” in order to allow aircraft to land at adjacent major airfields, but for gliding purposes they should also be considered as “prohibited.”

They all have a radius of 2 NM and extend to between 2,000ft and 2,500ft AMSL. It is most inadvisable to place oneself in the position of having to land within a Prohibited Area.

Short term Prohibited Areas may be established anywhere from time to time: information about these can be obtained from NOTAMS.

DANGER AREAS

The U.K. is covered with Danger Areas of many types, shapes and sizes. They are active part-time, permanently or when notified by NOTAM. Full details will be found in the Air Pilot, RAC Section; the Chart of U.K. Airspace Restrictions is also useful.

Some glider pilots express the view that a Danger Area is not a Prohibited Area, so it would not be illegal to penetrate it. The following two points should be considered:

The Air Pilot lists only the type of activity most likely to be encountered, but in practice various hazards may be encountered in one area simultaneously.

Many Danger Areas contain areas over which flight is prohibited at times within the period of activity of the Danger Area by reason of bye-laws made under the Military Lands Act 1892 and associated legislation. Violations of Danger Areas by civil aircraft are causing concern to the authorities: Aeronautical Information Circular 69/1980 explains that the act will be used to apply airspace restrictions to all Military Danger Areas where possible.

It is also worth noting that the Air Pilot does not list Danger Areas with upper limits 500ft or less above the local surface, to which prohibiting bye-laws may also apply.

Glider pilots should therefore regard all Danger Areas as prohibited.

HAZARDOUS AREAS

Other types of hazard include Free Fall Parachute sites. The airspace is contained in a circle of 1½ NM radius from the centre of the drop zone up to a maximum of Flight Level 120.

It may not be apparent to a glider pilot, observing the drop zone in flight, whether or not there is parachuting in progress: parachutists normally free-fall down to 2,000ft AGL and are extremely difficult to see. Beware!

HIGH INTENSITY RADIO TRANSMISSION AREAS

Within these areas there are powerful radio emissions which may cause interference with glider radios and electronic variometers.

On such area is so powerful that prolonged exposure could be injurious to health. Details are in the Air Pilot, RAC Section.

RESTRICTED AREA – R.A.F. SCAMPTON

In addition to the Atomic Energy Restricted Areas mentioned above, the other significant Restricted Area is at Scampton to protect Red Arrows display training. The area is a circle of 5 NM radius extending to 6,500ft AMSL, active when Scampton is open (Monday-Friday 0830-1700 (winter), 0730-1600) (summer) and when otherwise notified by NOTAM.

Gliders may not enter this airspace except by permission from ATC Scampton (telephone Lincoln (0522) 730421 ext 314/330) or ATC Waddington (telephone Lincoln (0522) 720271 ext 451/452) or Waddington Approach on 127.35 MHz.

Proposals are in hand to enlarge this in the Waddington area and rename it Waddington; details will be published in due course.

MILITARY LOW FLYING SYSTEM

Low flying by high performance military aircraft takes place in most parts of the U.K. up to 2,000ft above ground level, with the greatest concentration between 250ft and 500ft. A chart is available denoting the system (see References).

All gliding sites are notified to the military authorities and all Club CFI's by now have a supply of forms for reporting any dangerous infringement of their ATZ to the Ministry of Defence.

THE AIRMISS SYSTEM

Glider pilots are accustomed to flying in close proximity to each other and may not appreciate that it can be quite alarming for the pilot of a powered aircraft to suddenly encounter a glider at close quarters. The reluctance of most glider pilots to report Air Misses is generally not shared by the powered fraternity: this usually results in extra work for the Airspace Committee! The Air Miss System is generally helpful and glider pilots should take advantage of it whenever appropriate. Full details are in the Air Pilot, RAC Section, but generally the procedure can be activated by a telephone call to the nearest airfield with an ATC service on the day of the incident.

REFERENCES

The airspace situation is complicated and changing all the time. The following publications collectively provide a thorough and up to date information on U.K. Airspace.

BLANIK above the waves near Perranporth

(Phc

If you want the best in Gliding, come to

Lasham Gliding Centre

★ THE UK's TOP SOARING SITE

- Flying 364 days a year with 5 tugs and 4 towcars.

★ THE UK's BEST TRAINING CENTRE

- Elementary Pre & Post solo residential courses 50 weeks a year;
- Advanced course: Thermalling & X-Country;
- Full time instructors always available;
- Eight two seaters, including a Janus 'C';
- One Super-Falke;

★ THE FINEST CLUB AMENITIES

Comfortable accommodation, modern clubhouse with canteen and bar, first class caravan and camping site.

Private owners are welcome, or join Surrey and Hants and fly the Club's fleet. Comprehensive range (K8 to VENTUS 16.6 m).

BLACK MOUNTAINS

GLIDING CLUB (TALGARTH)

Situated in the Brecon Beacons National Park amongst the highest mountains in South Wales, Talgarth has more soarable days than any other UK gliding club. Longest ridge routes; wave in all wind directions.

In 1985 the Club average flight duration was 1½ hours. Surely the premier location for any soaring course. Courses run from mid March to mid October and include holidays, introductory and advanced mountain flying cross country courses.

AUSTIN AVIATION

FOR ALL GLASER DIRKS
SAILPLANES (11 years on type)

DG.300 – the only Standard Class aircraft with all the following features:

- Boundary Layer blowing Turbulators on trailing edge undersurface.
- Water Ballast tank in the fin to allow optimum centre of gravity selection.
- All controls connect automatically on rigging.
- 1,157lb max. weight – 420lb or 286lb H₂O bags at choice.
- 5 x 5.00 mainwheel, well sprung with generous ground clearance.

The best visibility to be found in any glider.

DG 101G . . . well loved standard class aircraft.

We are planning a new 15/17 metre flapped wing for 1987 – details soon.

Some options left for 1986 and 1987. Get your deposit down NOW.

WEATHER FORECAST OFFICES

(acknowledgements to Met 07, Bracknell)

The forecast offices which the Meteorological Office would prefer glider pilots to telephone for advice are as follows. Most of them provide a 24-hour service, although, at certain times, especially at offices on RAF stations, gliding forecasts may have to accept a lower priority.

Aberdeen (Dyce)	Aberdeen (0224) 722334
Leeds	Leeds (0532) 457687
Belfast (Aldergrove)	Crumlin (08494) 53275
Birmingham	Birmingham (021) 743 6241
Cardiff	Cardiff (0222) 390492
Glasgow	Glasgow (041) 221-6116
Honington (R.A.F.)	Honington (03596) 481
Leuchars (R.A.F.)	Leuchars (033483) 224
London (Heathrow)	London (01) 745-3103/06
Manchester	Manchester (061) 499 5033
Plymouth (R.A.F.)	Plymouth (0752) 42534
Upavon (R.A.F.)	Upavon (098063) 351 Ext. 283/317

However, this list does not preclude the continuance of any long-standing arrangements between pilots or clubs and offices not mentioned.
